
WorldDeciding

Results and Demo Presentation

Implemented screens, flows, and observed engineering outcomes.

Design and Development of a Web Platform for Cross-Cultural Opinion Analysis

Prepared by: [Student Name] | May 1, 2026

Agenda

- 1 Implemented scope
- 2 Public and authenticated user flows
- 3 Statistics and comparison demo
- 4 Discussion, profile, and admin demo
- 5 Engineering outcomes and remaining gaps

Implemented Scope

The prototype covers the main user, admin, analytics, and privacy flows.

Backend

4 layers

Domain, Application, Infrastructure, API

Core entities

11+

Questions, votes, comments, users, stats, tokens

Deliverables

9 files

Thesis, 5 slides, guide, install PDF, license TXT

Home and Discovery Demo

- Live question panel updates periodically.
- Quick links move users to questions, categories, and leaderboard.
- Public browsing works before authentication.
- Voting requires registration or login.

Registration and Login Demo

- Registration captures email, password, country, birth date, and gender.
- Email confirmation is required before login.
- Access tokens stay in memory; refresh token is in an HttpOnly cookie.
- Axios interceptor automatically refreshes expired access tokens.

The screenshot shows the 'Start your voting profile' registration form for WorldDeciding. The form is titled 'CREATE ACCOUNT' and 'Start your voting profile'. It includes a warning: 'Choose your country carefully during registration. It cannot be changed later from your profile.' The form fields are: Email (text input), Password (text input with a 'PASSWORD RULES' box below it), Country (dropdown menu), Birth date (text input with a calendar icon), and Gender (dropdown menu). The 'PASSWORD RULES' box lists: 'At least 10 characters', 'At least 1 digit', 'At least 1 uppercase letter', 'At least 1 lowercase letter', and 'At least 1 symbol (e.g. !@#\$%)'. The Country dropdown menu is open, showing a list of countries with their codes: Afghanistan (AF), Åland Islands (AX), Albania (AL), Algeria (DZ), American Samoa (AS), Andorra (AD), Angola (AO), Anguilla (AI), and Antarctica (AQ). Below the Country dropdown, it says 'Selected country code: This country selection is permanent after account creation.' The Birth date field has the placeholder 'gg.aa.yyyy'. The Gender dropdown menu has the option 'Prefer not to say'. At the bottom, there is a blue 'Sign up' button and a link 'Already have an account? Sign in'.

Vote and Stats Demo

- User selects an option and confirms vote submission.
- Vote result updates the question statistics.
- Option percentages animate on the frontend.
- The stats page exposes views, votes, countries, age, and gender.

Country Compare Demo

- User selects two countries from the country list.
- The modal compares country totals and option splits.
- Global baseline helps users interpret whether a country is close to or far from the overall pattern.
- AI insight provides cautious narrative context.

Discussion Demo

- Authenticated users post comments and replies.
- Users can sort by top or new, like comments, and load replies.
- AI summary condenses recent and top-liked comments.
- Summary generation is rate limited.

Completed Interface Evidence

Category discovery

Leaderboard

Profile management

Admin question review

Admin Demo

- Admins review question lists and status.
- Bulk import supports structured question creation.
- Categories are managed separately.
- Role-based authorization protects admin endpoints.

Operational Results

What Works

- End-to-end voting and statistics flow
- Admin content lifecycle
- AI summary integration with fallback behavior
- Dockerized database and cache services

What Needs More Work

- Automated integration tests
- Moderation and reporting queues
- Sample-size suppression
- Production monitoring and backup routines

Results

- The platform implements the requested opinion collection and comparison workflow.
- The architecture is maintainable enough for continued development.
- Security and privacy controls are present in core flows.
- The main remaining gaps are sampling validity, moderation, threshold suppression, and automated tests.

Demo Script

- Start with public browsing: home, question list, categories, and leaderboard.
- Register or log in, cast a vote, and open statistics for the same question.
- Compare two countries, then open comments and AI summary.
- Switch to admin account, review questions, import new questions, and publish content.
