

WorldDeciding User Guide

Purpose

WorldDeciding is a web platform for collecting votes on public questions and exploring how participation patterns differ across countries and demographic groups. Results should be interpreted as platform participation signals, not representative national survey estimates.

Visitor Features

- Open the home page to view the live question, recent questions, categories, and public navigation.
- Browse question lists, category pages, leaderboard pages, and public statistics where available.
- Use public views for discovery. Voting, commenting, likes, profile editing, and AI summaries require an account.

Account Registration and Login

- Create an account with email, password, country, birth date, and gender fields.
- Confirm the email address before logging in when email confirmation is enabled.
- Use the login page to start an authenticated session. Access tokens are handled by the frontend and refresh tokens are stored in an HttpOnly cookie.
- Use forgot password and reset password screens when password recovery is needed.

Voting and Statistics

- Open a question detail page and select one answer option.
- Submit the vote. The platform enforces one active vote per user for each question and applies a cooldown before vote changes.
- Open the statistics view to inspect option distribution, country distribution, age-band distribution, gender distribution, views, and vote totals.
- Use country comparison to select two countries and compare their option splits against the global platform baseline.

Discussion and AI Summary

- Authenticated users can post comments, reply to comments, like comments, and sort discussion by new or top.
- AI summaries condense discussion signals and should be read as tentative assistance, not as a final interpretation.

- Abuse and rate limits may temporarily block repeated votes, views, password attempts, comments, or AI summary requests.

Profile, Privacy, and Consent

- Use the profile page to review or update public profile information where supported.
- Cookie and privacy pages explain consent and data handling.
- Analytics is optional and should only run after analytics consent is granted.
